VEDAS

Vocational Education for Disinfection
and Sterilization-
a **VET**

Transfer of Innovation Application in the LLP- Leonardo Programme 2010

- Initiated by Nordic European countries in 2008
- Approved and granted in July 2011, by EU IPO, with support from the European Commission of Health
- Project period 1 Oct 2011- 30 Sept 2013

The Aim

- to establish a formal post high school education for Decontamination and CSSD staff.
- improve comparability between different national programs and qualifications thereby increasing the mobility and employability .
- to create constructive relationships with partners from other countries, including work practice in neighboring countries.
- improve the performance, quality and attractiveness of VET and strengthens the link between training and the world of work. By developing a cohesive education we enable sterile technicians to act in compliance to laws and regulations concerning health and safety.
- The training also reduces the risk of mismanagement

The objective

- To** establish a basic and advanced educational syllabus and curriculum at a high, minimum level
- To** create a mutual transparent syllabus for all sterile technician training, in order to enable work across borders, with equal competence. The syllabus will include modules, aims, educational methods, tutor criteria, student literature and examination criteria.

Dissemination																									SW				

Dissemination is important

- To spread the result to other countries and possible Key Stakeholders, is regarded vital from EU and the project group.
- We have encountered great international interest from the trade but also from authorities.
